wash

PW5064 Features

Whether it's a school, office or production plant, mop heads and cleaning cloths need to be cleaned thoroughly, often several times a day. In hygienically sensitive areas such as hospitals and care centres, it is also vital that these are thoroughly disinfected.

unique honeycomb drum has a sculptured surface to create a thin film of water which cushions the textiles during the cycle, reducing fibre damage and increasing the lifespan of the mops or cloths

short effective programmes ensure fast turnaround times and high throughput, with 6.5kgs washed in just 42 minutes

time saving cloth impregnation cycle ensures cloths and mops leave the washer disinfected and ready to use

6 feed auto dosing capability allows for multiple treatment programmes to be automatically dosed, reducing excessive use of detergents or disinfectants

reinforced shock absorbers, drum bearing and electronic load imbalance controls provide quiet spin cycles with a robust build to cope with the rough and tumble of the load and environment

unique drain valve prevents soiling clogging up the machine, giving a clean start every time

intelligent pre-wash removes coarse soiling and mopping water before the main wash

Laundryserv are committed to providing a complete quality service including:

- A 24 / 7 staffed contact line
- A choice of Service Level Agreements, including an 8 hour response option
- 95% First time fix rates
- Preventative maintenance visits
- Nationwide team of fully qualified, trained engineers
- Choice of full service rental or purchase and callout packages

Auto Dosing System*	Y

***Laundryserv's Auto Dosing System** provides a reliable and efficient addition to any on-site laundry, ensuring that the correct amount of detergent or chemical treatment is used in every wash. Easy to use, it saves money by eliminating over-dosing of chemicals and by reducing chemical handling and possible spillages provides a cleaner, safer environment for staff.
